

Navigation and Routing

Routing

❑ What is routing?

- Routing the standard way to navigate in a web applications
- Each unique route must always return the same page
- Routes can have route and query parameters

Router

1. Angular Router is a separate package `@angular/router`
2. not part of the official `@angular/core`
3. Supports multiple routes, route parameters, query parameters, regex routes, etc...

Routing

❑ **How does it work?**

- Just register a mapping between a URL and a Component

Demo
